

Please write a small literature review for your project. Include in IEEE format all your references. You need at least 5 references. No more than one book or web address. The rest are journal publications. Summarize your findings IN YOUR OWN WORDS. "Cut and Paste" is considered plagiarism. If you have any doubt about what is considered appropriate, ask!

You start off with an introduction to the theory of your project. Then you should have a literature review based on the device you wish to simulate. You can end with a conclusion, but you need to select the structure you wish to simulate in TCAD. You need to cite all ideas not your own according to IEEE format.
